

2024 年 6 月大学英语四级真题 (第三套)

Part I

Writing

(30 minutes)

Directions: Suppose your university is seeking students' opinions on **whether university canteens should be open to the public**. You are now to write an essay to express your view. You will have 30 minutes for the task. You should write at least 120 words but no more than 180 words.

Part II

Listening Comprehension

(25 minutes)

说明：每次全国四级考试一般只考两套听力，第三套为重复题目，只是选项顺序不同，故不再重复。

Part III

Reading Comprehension

(40 minutes)

Section A

Directions: In this section, there is a passage with ten blanks. You are required to select one word for each blank from a list of choices given in a word bank following the passage. Read the passage through carefully before making your choices. Each choice in the bank is identified by a letter. Please mark the corresponding letter for each item on **Answer Sheet 2** with a single line through the centre. You may not use any of the words in the bank more than once.

【非真题，题目来源仅供回忆参考】

Over the coming decades, millions of jobs will be threatened by robotics and artificial intelligence. Despite intensive academic 26 on these developments, there has been little study on how workers 27 to being replaced through technology.

To find out, business researchers at TUM and Erasmus University Rotterdam conducted 11 scenarios studies and surveys with over 2,000 persons from several countries in Europe and North America. Their findings have now been published in the journal *Nature Human Behaviour*.

Human replacements pose greater threat to feeling of self-worth

The study shows: In principle, most people view it more 28 when workers are replaced by other people than by robots or intelligent software. This preference 29, however, when it refers to people's own jobs. When that is the case, the majority of workers find it less upsetting to see their own jobs go to robots than to other employees. In the long term, however, the same people see machines as more threatening to their future role in the workforce. These effects can also be observed among people who have recently become unemployed.

The researchers were able to identify the causes behind these 30 paradoxical results, too: People tend to 31 themselves less with machines than with other people. Consequently, being replaced by a robot or a software 32 less of a threat to their feeling of self-worth. This reduced self-threat could even be observed when participants assumed that they were being replaced by other employees who relied on technological abilities such as artificial intelligence in their work.

Weaker organized resistance?

"Even when unemployment results from the 33 of new technologies, people still judge it in a social context," says Christoph Fuchs, a professor of the TUM School of Management, one of the authors of the study. "It is important to understand these 34 effects when trying to manage the massive changes in the working world to minimize 35 in society."

For example, the insights could help to design better programs for the unemployed. "For people who have lost their job to a robot, boosting their self-esteem will be less of a priority," says Fuchs. "In that case it is more important to teach them new skills that will reduce their concerns about losing out to robots in the long term."

A) compare	F)	K) poses
B)	G) favorably	L) psychological
C)	H)	M) react
D) debate	I) introduction	N) reverses
E) disruptions	J)	O) seemingly

Section B

Directions: In this section, you are going to read a passage with ten statements attached to it. Each statement contains information given in one of the paragraphs. Identify the paragraph from which the information is derived. You may choose a paragraph more than once. Each paragraph is marked with a letter. Answer the questions by marking the corresponding letter on **Answer Sheet 2**.

【非真题，题目来源仅供回忆参考】

No escape as 'snowday' becomes 'e-learningday'

- A) When snowy weather arrives in the US, it means the chance of school children benefiting from the long-standing tradition of the "snow day", when schools are forced to close and students get an unexpected day off.
- B) It's a familiar theme from American film and TV shows, with children getting the good news and then running outside for some seasonal snowman-building and snowball throwing, against a montage of Eighties pop music. But the tradition is now over for pupils in US states such as South Carolina, Nevada, Georgia and Indiana.
- C) This academic year, many school boards have introduced policies which require students to work from home if the school is shut by snow or extreme weather. They are known as "e-learning days", which certainly sounds less fun than a snow day. Teachers are also losing their snow days and instead will be expected to be on hand to take a virtual register and answer students' questions online.
- D) A pilot programme in a school district in Anderson County, South Carolina has supplied students with electronic tablets loaded with assignments to complete in the event of a school closure. If it is successful, it could be rolled out across the state.
- E) But some parents object to the new policy, if the vigorous debate on the Facebook page of Anderson County school district is anything to go by. "When it snows, let the kids enjoy it," said one commenter. Another said the decision would "ruin school even more", and someone else called snow days "a fun part of childhood". But proponents of the policy say it means children will miss fewer days of school. It will also bring to an end a less

popular US high school tradition: the “make-up day”, which requires students in many states to make up the time lost due to weather by working during school holidays. Students in North Carolina already have several make-up days scheduled because of school closures during Hurricane Florence, which struck in September. Tom Wilson, the superintendent of Anderson County school district, said the change away from snow days makes practical and financial sense. He said technology has changed every profession, so it makes sense to use it to “eliminate” make-up days.

- F) Adam Baker of the Department of Education in Indiana said e-learning days were proving a “great success”. He said most Indiana schools already use digital devices during lessons, so it was an “easy decision” to extend this to days when schools are closed. He denies the decision is depriving children of the chance to enjoy the snow. “Students are still able to enjoy snow days and outside time,” he said. “Many have PE and science assignments that have them out enjoying the weather.” But local school superintendents in Ohio are resisting proposals to adopt e-learning days. They fear that students without internet access at home will be disadvantaged by the policy, and superintendent Tom Roth is concerned that e-learning days will offer a lower quality of education.
 - G) There are also so-called “blizzard bags”, with assignments that children take home ahead of an expected snow closure. But Mr Roth says it is not sufficient as a replacement. “I think we still need the class time to give our kids the education that they deserve,” he said. “You can’t get that with a blizzard bag or doing the work from home like that. It’s not going to be as effective.”
 - H) There is a long-running debate on whether missing days of school affects attainment. In England, where the focus has been on tackling truancy, the Department for Education published research in 2016 arguing that missing any days at school could have a negative impact on results. Even a few days lost in a year could be enough to miss out on getting a good exam grade, the DFE’s research concluded. This differed from the findings of a study from Harvard University in the US, which concluded that missing a few occasional days because of the weather did not damage learning. The study examined seven years of school results data and could not find any impact from snow closures. What caused more disruption was when schools tried to stay open in bad weather, even though many staff and pupils were absent. But weather can make a difference to school results, according to another piece of Harvard research published last summer.
 - I) It’s hot weather that has the negative impact. The results of 10 million school students were examined over 13 years and researchers found a “significant” link between years with sweltering weather and lower results.
 - J) However, research shows that authorised absences from school such as during extreme weather are less problematic for students than absences that are not authorised.
36. There is opposition to the practice of giving children assignments to take home before extreme weather forces a school closure.
 37. New policies adopted by many US schools require students to do online learning at home in case of a school closure.
 38. According to some research, extreme hot weather negatively affects students’ performance.
 39. There is a time-honoured tradition in the US for school kids to stay at home on “snow days”.

40. Debates on social media show some parents are opposed to ending the “snow day” tradition.
41. In more northern regions of the US, school is less likely to be affected by snowy weather.
42. Research indicates absences from school with permission do not cause as many problems as those without permission.
43. There is objection to e-learning days owing to fear that students with no access to the Internet at home will suffer.
44. In a pilot programme, students are given electronic devices to do assignments when schools are closed.
45. A long-standing debate is going on over the impact of school absences on students’ academic performance.

Section C

Directions: *There are 2 passages in this section. Each passage is followed by some questions or unfinished statements. For each of them there are four choices marked A), B), C) and D). You should decide on the best choice and mark the corresponding letter on **Answer Sheet 2** with a single line through the centre.*

Passage One

Questions 46 to 50 are based on the following passage.

【非真题，题目来源仅供回忆参考】

It may sound surprising, but you don’t have to be interested in fashion, or even in history, to enjoy “Dress Codes: How the Laws of Fashion Made History.” I happen to be interested in both, and ended up enjoying the book for completely different reasons.

Richard Thompson Ford is a law professor, and you probably won’t forget that for even one page. His carefully reasoned arguments, replete with examples, sound almost like reading a court opinion, only maybe wordier. You will probably never think of fashion as something trivial again.

Ford’s thesis is that the best way to understand what particular fashions meant in any given era is to look at the restrictions placed on them, much like a fossil reveals the shape of the living object that once produced it. Through this lens, he shows us that the first sumptuary laws enacted in the 1200s to ensure that only the nobility were allowed to wear certain fabrics, colors and trimmings reflected the rise of the middle class, who were now able to ape some of these fashions. The status of the upper classes was threatened; fashion was a tool to preserve it.

Ford takes the reader through the evolution of fashion while examining the underlying motivations of status, sex, power, and personality, which, he posits, influenced all innovations in fashion in the past and which continue to influence us today. His writing is more than a little dense — dense with research, clauses, and polysyllabic, precise adjectives and nouns. But there’s also humor and enough personal anecdotes to make the writing relatable. No one is spared his incisive analysis: not the easy targets of 19th century women’s mutilating fashions nor the modern uniforms of Silicon Valley T-shirts or New York investment banker Patagonia vests.

But the greatest strength of this book (on fashion!) is its intellectual depth. Ford asks us to question

unconscious beliefs, to realize that we almost never do so, to understand that the simplest choices are fraught with meaning, and yet that meaning can and does change all the time. Consider the fact that a 1918 catalog insisted that boys and girls be dressed in the appropriate color (pink, the stronger color, was reserved for boys, while blue, the more dainty, should be used for girls). We believe our thinking today is evolved; Ford shows us it's not. That creaking noise you hear as you read "Dress Codes" is the rusty machinery of your brain.

46. What does the author think of the book *Dress Codes: How the Laws of Fashion Made History*?

C) It makes enjoyable as well as informative reading.

47. How can people best understand a particular fashion in an era, according to Ford?

A) By examining the restraints imposed on it.

48. What was the aim of the first laws passed regarding fashion in the 1200s?

D) To preserve the status of the nobles.

49. What does the author think of Ford's writing?

B) It makes heavy reading but is not lacking in humor or appeal.

50. What does the author say is the greatest strength of Ford's book?

D) Intellectual depth.

Passage Two

Questions 51 to 55 are based on the following passage.

【非真题，题目来源仅供回忆参考】

The art of persuasion means convincing others to agree with your point of view or to follow a course of action. For some of us, persuasion is an innate quality and the power of influencing comes naturally. For the rest of us, persuasion skills can be learned and developed over time.

The power of persuasion is a beneficial foundational skill. Workplaces value employees with persuasion skills because they can impact several aspects of job performance. Besides, teamwork and leadership heavily rely on the power of persuasion and the ability to influence others. Without persuasion skills, employees may not be as committed to or sold on the importance of an organization's vision and long-term mission.

Persuasion skills meaning, in simple words, is the ability to make intentional and successful efforts in influencing someone either through written or verbal communication. Simply put, persuasion skills refer to the skill of changing or influencing the behaviors, beliefs or attitudes of someone or a group towards another idea, person or event. The art of persuasion usually involves reasoning, sharing feelings, and cleverly conveying information.

Imagine trying to get a friend to watch the web-series you've recently binge-watched. You'll try to highlight the most exciting takeaways from the show and the impact it had on you or the way it made you feel. This is a classic example of persuasion where people try to get others to develop similar interests. Now imagine taking this art of persuasion and effectively using it to influence your coworkers. It'll not only help you get excited about similar ideas; it'll also help you motivate each other to achieve common goals. This is the power of persuasion.

In order to learn the art of persuasion at the workplace, you also need to understand how to handle conflicts and reach agreements. Harappa Education's Negotiating Wisely course will teach how to effectively use your persuasion skills. The Dual Concern Model will help you learn the different methods of negotiation and persuasion.

Good communication is the first step in effective persuasion. Since persuasion is a process that involves influencing others, the most effective way is to communicate with your coworkers. It can be either verbal or non-verbal or both, but your message should leave an impact on your audience. If they engage with you, then they're open to hearing you out.

Before you try to persuade someone, understand their viewpoints on a particular topic. If you actively listen to others, it shows that you're patient and respectful to them. Giving people the chance to share their thoughts makes them feel valued. This way of showing your support will help establish trust. You'll be able to recognize their motivations better and it'll allow you to prepare effective arguments to win their support.

Emotional intelligence is a skill that'll help you connect with your coworkers better. If you can pick up on your listener's emotions, then you can respond appropriately. Adjust your persuasion tactics depending on the body language and mood of your listener.

Before you get somebody to get on-board with your idea, you should help them understand why they should pursue it. Your listeners should make a logical choice in order to fully commit to your ideas or plans. Use logic and reasoning to support your schemes. Back them up with evidence if needed. A chart or spreadsheet can help communicate your logic better. Use it to make impactful arguments.

Successful persuasion skills are based on your ability to have positive interactions and maintain meaningful relationships with people. In order to sustain those relationships, you must be able to work in their best interests as well. Your coworkers are more likely to agree with you when they succeed alongside you. The more they achieve and progress, the better your credibility.

We persuade and get persuaded every day. Asking our kids to tidy their room or listening to salespeople at the mall—we're either convincing or getting convinced. A vast majority of people prefer collaboration and teamwork over hierarchy; no one likes to be told what to do or to be pushed around. Therefore, organizations and leaders should adapt powerful persuasion skills to bring necessary changes.

51. What does the author say about the ability to be persuasive in the first paragraph?

A) People may either be born with it or be able to cultivate it.

52. Why are persuasion skills greatly valued in the workplace?

C) They help motivate coworkers to strive for a common goal.

53. What should people do to learn the art of persuasion at the workplace?

A) Acquire effective communication skills.

54. When are you more likely to succeed in persuading your coworkers?

D) When they are convinced they will make achievements together with you.

55. Why are organizations and leaders advised to adopt powerful persuasion skills to bring about necessary

changes?

B) To allow for the preferences of most people of today.

Part IV

Translation

(30 minutes)

Directions: For this part, you are allowed 30 minutes to translate a passage from Chinese into English. You should write your answer on **Answer Sheet 2**.

汉语中的“福”字（the character *fu*）表示幸福和好运，是中国传统文化中最常用的吉祥（auspicious）符号之一。人们通常将一个大大的福字写在红纸上，寓意期盼家庭幸福、社会安定、国家昌盛。春节贴福字是民间由来已久的习俗。为了欢庆春节，家家户户都会将福字贴在门上或墙上，表达对幸福生活的向往、对美好未来的期待。人们有时还将福字倒过来贴，表示幸福已到、好运已到。
